Thank you for choosing our product!

This User Manual is designed to show you how to use this camera quickly and make use of all the features. Please read all directions and instructions carefully before using this product.

Declarations

FCC/Warranty

Federal Communications Commission (FCC) Statement

This camera has been tested and found to comply with the limits for a class A digital device, pursuant to Part 15 of the FCC rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area may cause harmful interference, in which case the user will be responsible for correcting any interference.

Guarantee and Compensation

RGBlink provides a guarantee relating to perfect manufacturing as part of the legally stipulated terms of guarantee. On receipt, the purchaser must immediately inspect all delivered goods for damage incurred during transport, as well as for material and manufacturing faults. RGBlink must be informed immediately in writing of any complains.

The period of guarantee begins on the date of transfer of risks, in the case of special systems and software on the date of commissioning, at latest 30 days after the transfer of risks. In the event of justified notice of compliant, RGBlink can repair the fault or provide a replacement at its own discretion within an appropriate period. If this measure proves to be impossible or unsuccessful, the purchaser can demand a reduction in the purchase price or cancellation of the contract. All other claims, in particular those relating to compensation for direct or indirect damage, and also damage attributed to the operation of software as well as to other service provided by RGBlink, being a component of the system or independent service, will be deemed invalid provided the damage is not proven to be attributed to the absence of properties guaranteed in writing or due to the intent or gross negligence or part of RGBlink.

If the purchaser or a third party carries out modifications or repairs on goods delivered by RGBlink, or if the goods are handled incorrectly, in particular if the systems are commissioned operated incorrectly or if, after the transfer of risks, the goods are subject to influences not agreed upon in the contract, all guarantee claims of the purchaser will be rendered invalid. Not included in the guarantee coverage are system failures which are attributed to programs or special electronic circuitry provided by the purchaser, e.g. interfaces. Normal wear as well as normal maintenance are not subject to the guarantee provided by RGBlink either.

The environmental conditions as well as the servicing and maintenance regulations specified in this manual must be complied with by the customer.

Operators Safety Summary

The general safety information in this summary is for operating personnel.

Do Not Remove Covers or Panels

There are no user-serviceable parts within the unit. Removal of the top cover will expose dangerous voltages. To avoid personal injury, do not remove the top cover. Do not operate the unit without the cover installed.

Power Source

This product is intended to operate from a power source that will not apply more than 230 volts rms between the supply conductors or between both supply conductor and ground. A protective ground connection by way of grounding conductor in the power cord is essential for safe operation.

Grounding the Product

This product is grounded through the grounding conductor of the power cord. To avoid electrical shock, plug the

power cord into a properly wired receptacle before connecting to the product input or output terminals. A protective-ground connection by way of the grounding conductor in the power cord is essential for safe operation.

Use the Proper Power Cord

Use only the power cord and connector specified for your product. Use only a power cord that is in good condition. Refer cord and connector changes to qualified service personnel.

Use the Proper Fuse

To avoid fire hazard, use only the fuse having identical type, voltage rating, and current rating characteristics. Refer fuse replacement to qualified service personnel.

Do Not Operate in Explosive Atmospheres

To avoid explosion, do not operate this product in an explosive atmosphere.

Installation Safety Summary

Safety Precautions

For all device installation procedures, please observe the following important safety and handling rules to avoid damage to yourself and the equipment.

To protect users from electric shock, ensure that the chassis connects to earth via the ground wire provided in the AC power Cord.

The AC Socket-outlet should be installed near the equipment and be easily accessible.

Unpacking and Inspection

Before opening device shipping box, inspect it for damage. If you find any damage, notify the shipping carrier immediately for all claims adjustments. As you open the box, compare its contents against the packing slip. If you find any shortages, contact your sales representative.

Once you have removed all the components from their packaging and checked that all the listed components are present, visually inspect the system to ensure there was no damage during shipping. If there is damage, notify the shipping carrier immediately for all claims adjustments.

Site Preparation

The environment in which you install your device should be clean, properly lit, free from static, and have adequate power, ventilation, and space for all components.

Electric Safety

Installation and operation must accord with electric safety standard

Polarity of power supply

The power supply of the product is DC12V, the max electrical current is 2A .Polarity of the power supply as the following drawing.

Careful of installation

Never move the camera by seizing the camera head. Don't rotate camera head by hand; otherwise, mechanical trouble will occur.

This series item must be put on the smooth desk or platform, and it can not be installed slant ways;

If the camera is installed on TV or computer, the base can be fixed by four double-sided adhesive trays.
Don't apply in corrosive liquid, as or solid environment to avoid the cover which is made up of organic material.
To make sure no obstacle in rotation range.
Never power on before installation is completed.

Don't disassemble discretionarily.

There are no parts that users can repair by themselves on this product. We are not responsible for any unauthorized modification or dismantling.

Avoid Magnetic Interference

Magnetic field under specific frequency may affect this product image; this is Class A product. Application in domestic environment may cause radio interference. Therefore, user should take corresponding measures.

Caution

If the power cord need to be extended, must only extend the cord connect to outlet 220V/110V. Do not extend the DC 12V power cord, otherwise malfunction could be caused.

1.2 Product Overview

It features built-in Built with SONY high quality CMOS sensor, which allows it to output 4K@60fps video. It fully satisfies all scenario demand of Tele-education, Lecture Capture, Webcasting, Videoconferencing, Tele-training, Tele-medicine, Interrogation and Emergency command systems.

Interface Diagram

Product Features

- **4K UHD Resolution:** SONY CMOS sensor. Resolution is up to 4K with frame rate up to 60fp.。
- **Dual Stream Output:** USB support the main stream and sub stream output at the same time, and can meet the needs of near-end and far-end;
- **Optical Zoom Lens:** 12X optical zoom 80.4°wide-angle lens, 25X optical zoom 59.2°wide-angle lens, and 31X optical zoom 59° wide-angle lens.
- **Interfaces:** Support HDMI, SDI, USB 2.0, LAN (with POE or with POE&NDI), and HDMI, USB, LAN output 4K audio and video at the same time.

- **Leading Auto Focus Technology:** Fast, accurate and stable auto focusing technology.
- **Low Noise and High SNR:** Super high SNR image is achieved with low noise CMOS. Advanced 3D noise reduction technology further reduces the noise while ensuring high image clarity.
- **Multiple Audio/Video Compression Standards:** LAN interface supports H.264/H.265 video compression, USB2.0 interface supports MJPG, H264, YUY2, NV12, H265; A-IN interface supports AAC audio compression coding.
- **Audio Input Interface:** 8000 sampling frequency. support AAC audio compression.
- **Multiple Network Protocol:** Support ONVIF, GB/T28181, RTSP, RTMP, SRT&NDI (optional) protocols; Support RTMP push mode, easy to be connected to streaming server (Wowza, FMS); Support RTP multicast mode; Support network full command VISCA control protocol.
- **Control Interface:** RS422 input(compatible with RS485), RS232 input/output, RS232 (cascade connection).
- **Multiple Control Protocol:** Support VISCA, PELCO-D, PELCO-P protocols; Support automatic identification protocols.
- **Multiple Presets:** Up to 255 presets (10 presets via remote control)
- **AI Human Detection:** Built in high speed processor and advanced image processing and analysis algorithm, and real-time tracking and zone tracking modes are available.
- **Multiple Application:** Online-education, Lecture Capture, Webcasting, Video conferencing, Tele-medicine, Unified Communication, Emergency command and control systems, etc.

1.2.2 Dimension

Chapter 2 Install Your Product

2.1 Power-on Initial Configuration

1) **Power-on:** Connect DC12V power supply adapter with power supply socket

2) **Initial Configuration:** The remote control receiving indicator flashes after power on, the pan-tilt turns left to the lowest left to the lowest, and then turns to the HOME position (both the horizontal and vertical positions are in the middle), while the movement first shrinks and then stretches. When remote control receiving indicator stops flashing, the self-checking is completed.

Notes:

1. After power on and self-checking, the camera will automatically return to the preset 0 position if it's pre-set.
2. The default address for the IR remote control is 1#. If the menu restored to factory defaults, the remote control default address will restore to 1#.

2.2 Video Output

1) **Network Output**

connect this product and your computer through network cable, then open the browser, enter the camera IP address (factory default 192.168.5.163) in the address bar, then to the login page and input a user name and password (factory default are "admin") ,Finally enter the preview page, and the image comes out.

2) **HDMI Video Output**

Connect the camera and the monitor via HDMI video cable, and the video output is available after the camera self-test.

3) **USB Video Output**

Connect the camera and the computer via USB video cable, open the video software and select the image device to output the video.

4) **SDI Video Output**

Connect the camera and the computer via SDI video cable, and the video output is available after the camera self-test.

2.3 Bracket Mount

Notes:

- 1.Ceiling or wall mounting brackets can only be mounted on template and concrete wall.
- 2.For safety reason, plasterboard is not recommended.

1) Wall Mounting

2) Ceiling Mounting

Chapter 3 Use Your Product

3.1 Remote Control

3.1.1 IR Remote Control

1. Standby Key

After 3S long press, the camera will step into standby mode. Long press 3S again, the camera will self-test again and back to HOME position. (Note: If power-on mode is turned on and Preset 0 is set, and there is no operation within 12s, it will automatically point to the specified preset position.)

2. Camera Address Selection

Select the camera address which wants to be controlled.

3. Number Key

Set or run 0-9 presets.

4. *,# Key

5. Focus Control Key

Auto Focus: Enter into auto focus mode.

Manual Focus: The camera focus mode is manual

Switch the camera focus mode to manual focus by pressing [Focus +] or [Focus -] to adjust.

6. Zoom Control Key

Zoom+:Lens near

Zoom-:Lens far

7. Set or Clear Preset key

Set Preset: Set preset key + 0-9 number key:

Clear Preset key: Clear preset key + 0-9 number key

8. Pan/Tilt Control Key

Press Key :Up

Press Key :Down

Press Key :Left

Press Key: Right

“HOME” Key: Return to the middle position or enter into the next level of menu.

9. BLC Control Key

Back Light ON / OFF: Turn on or off the back light

10. Menu Setting

Open or close the OSD menu.

Enter or exit the OSD menu or return to the previous menu.

13. AI Function Short Keys

- 【F1】：Turn off AI Human Detection
- 【F2】：Turn on AI Human Detection
- 【F3】：Toggle between real time tracking mode and region tracking mode
- 【F4】：Change tracking target on real tracking mode

3.1.2 Remote Control Usage

Finishing initialization, it can receive and execute the IR commands. Press the remote controller button, the indicator light is flashing; release the button, the indicator light stops flashing. Users can control the pan/tilt/zoom, setting and running preset positions via the IR remote controller.

Key Instruction:

- In this instruction, “press the key” means a click rather than a long-press, and a special note will be given if a long-press for more than one second is required.
- When a key-combination is required, do it in sequence. For example, 【*】+【#】+【F1】 means press 【*】 first and then press 【#】 and last press 【F1】.

1) Camera Selection

Select the camera address to control.

2) Pan/Tilt Control

- Up: press ▲
- Down: press ▼
- Left: press ◀
- Right: press ▶

Back to middle position: press 【HOME】

Press and hold the up/down/left/right key, the pan/tilt will keep running, from slow to fast, until it runs to the endpoint; the pan/tilt running stops as soon as the key is released.

3) Presets Setting, Running, Clearing

1. **Preset Setting:** to set a preset position, the users should press the **【SET PRESET】** key first and then press the number key 0-9 to set a relative preset,

Note: 10 preset positions in total are available by remote controller.

2. **Preset Running:** Press a number key 0-9 directly to run a relative preset.

Note: Action in vain if a relative preset position is not existed.

3. **Preset Clearing:** to clear a preset position, the user can press the **【CLEAR PRESET】** key first and then press the number key 0-9 to clear the relative preset;

Note : press the **【#】** key three times continually to cancel all the presets.

4) Zoom Control

ZOOM IN: press **【ZOOM】** key

ZOOM OUT: press **【ZOOM】** key

Press and hold the key, the camera will keep zooming in or zooming out and stops as soon as the key is released.

5) Focus Control

Focus (near): Press **【Focus+】** key (Valid only in manual focus mode)

Focus (far): Press **【Focus+】** key (Valid only in manual focus mode)

Auto Focus: Support

Manual Focus: Support

Press and hold the key, the action of focus will keep continue and stops as soon as the key is released.

6) Camera Remote Controller Address Setting

【*】 + 【#】 + 【F1】 : Camera Address No.1

【*】 + 【#】 + 【F2】 : Camera Address No.2

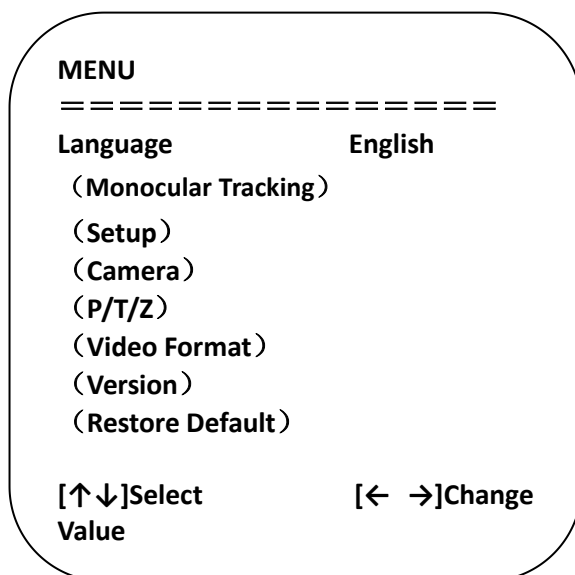

【*】 + 【#】 + 【F3】 : Camera Address No.3

【*】 + 【#】 + 【F4】 : Camera Address No.4

3.2 Menu Introduction

3.2.1 Main Menu

In normal working mode, press **【MENU】** key to display the menu, using scroll arrow to point at or highlight the selected items.

Language: Chinese/English

Setup: Enter into submenu of camera parameter

Monocular tracking: Enter the camera monocular tracking submenu item

Camera: Enter into submenu of camera parameter

Camera Version: Display camera version information

AF Version: Display the focus version information

3.2.8 Restore Default

Move the pointer to the (RESTORE DEFAULT) in the Main Menu, click the **【HOME】** and enter the (RESTORE DEFAULT) as follow.

Restore default: YES/NO. Color style and video format cannot be restored to factory default

Note: If the address of former remoter is not 1 but another one from 2, 3, 4, the corresponding camera address will restore to 1 when all parameters or system parameters are restored. User should change the remoter address to be 1 (press No.1 according to the camera so to get normal operation)

3.3 Network Connection

3.3.1 Connecting Mode

Direct connection: Connect the camera via network cable to external Internet access of the PC

Internet connection mode: Connect the camera to Internet by Router or Switch and user can log in the device by browser.

Note: Please do not put the power and network cable in places where can be easily touched to prevent video quality lowered by unstable signal transmission due to poor contact of cables.

The computer must have the network segment where the camera IP address belong to. The device will not be accessible if without the segment. I.E. The camera default IP address is 192.168.5.163, then segment 5 must be added in the computer. Specific steps are as below:

Firstly open the window of Local Area Connection Properties on computer, select the "Internet protocol version 4(TCP/IPv4)" as shown by picture on the left. Double click or click the property "Internet" protocol version 4 (TCP/IPv4) to enter into the Internet Protocol Version 4(TCP/IPv4) Properties window, select "Advanced" to enter into the Advanced TCP/IP Setting and add IP and subnet mask in the IP browser as picture shown below. Click the "Confirm" to finish the adding of IP segment. User can add the corresponding network segment according to the revised IP address of the camera.

Note: The IP address to be added cannot be same with that of other computers or devices. The existence of this IP address needs to be verified before adding.

To verify whether the network segment has been successfully added, click the "Start" and select "Operation" to input cmd, then click OK and open DOS command window, type ping 192.168.5.26, press Enter key to display information shown below, which means network segment adding is succeeded.

```
C:\Users\qq214>ping 192.168.5.26

Pinging 192.168.5.26 with 32 bytes of data:
Reply from 192.168.5.26: bytes=32 time<1ms TTL=128
Reply from 192.168.5.26: bytes=32 time=1ms TTL=128
Reply from 192.168.5.26: bytes=32 time<1ms TTL=128
Reply from 192.168.5.26: bytes=32 time<1ms TTL=128

Ping statistics for 192.168.5.26:
    Packets: Sent = 4, Received = 4, Lost = 0 (0% loss),
    Approximate round trip times in milli-seconds:
        Minimum = 0ms, Maximum = 1ms, Average = 0ms

C:\Users\qq214>
```

User can also to verify network connection as steps above mentioned after the finish of camera self-check. If IP is default, open DOS command window and input 192.168.5.163, then press Enter key, It will show the message as

below, which means network connection is normal.

```
C:\Users\qq214>ping 192.168.5.163

Pinging 192.168.5.163 with 32 bytes of data:
Reply from 192.168.5.163: bytes=32 time=2ms TTL=64
Reply from 192.168.5.163: bytes=32 time=1ms TTL=64
Reply from 192.168.5.163: bytes=32 time<1ms TTL=64
Reply from 192.168.5.163: bytes=32 time=4ms TTL=64

Ping statistics for 192.168.5.163:
    Packets: Sent = 4, Received = 4, Lost = 0 (0% loss),
    Approximate round trip times in milli-seconds:
        Minimum = 0ms, Maximum = 4ms, Average = 1ms

3.4 IE Login

3.4.1 Web Client

1) Web Client Login

Input the IP address 192.168.5.163 of the device in the address field of browser and click Enter button to enter into Web Client login page as below picture. User can login as administrator and normal user. If login as administrator (Default User name/Password: admin), users can preview, playback, configuration and cancel in the Web Client; If login in as normal user (Default User name/Password: user1 or user2), users can only preview, playback and logout, no option for configuration.

Note: Web access support browsers: IE, 360 browsers, and other conventional browsers.

Language Selection: click Chinese/English in the upper right corner of the login page to select the language type of the web interface.

2) Download/Install Plug in

When first using IE browser to access the web conferencing camera, the login page will appear "Playback plug-in is not installed, please download and install!" Click on this message, download and install MRWebXinstall.exe, according to information prompts.

After installing the plug, enter user name and password, click and Sign (initial default user name and password: "admin", users can change the user name and password on their own after entering) into the Web client management interface.

3.4.2 Preview

After successful login into the management interface, it enter the video preview interface. In the preview screen, users can control PTZ, zoom, focus, video capture, sound, focus, full screen and set the preset position, run, delete and other operations.

1) Login as administrator

User name and password default to admin

PTZ control can be carried out, zoom, focus, video capture, sound, zoom, full screen and set the preset position, run, and delete; you can preview, playback, configuration, logoff.

2) Login as normal user

Default User name/password: user1 or user2

PTZ control can be carried out, zoom, focus, video capture, sound, zoom, full screen and set the preset position, run, and delete; you can preview, playback and logout.

Note : There are no configuration rights for normal user login.

3.4.3 Monocular Tracking

Click Monocular Tracking to enter into the parameters setting page.

1. After login, enter into the management interface and turn on Tracking below “Monocular Tracking”.
2. On the right top is PTZ control area, in which you can set the preset region of Regional Tracking. Interface is as below.

- 1) **Tracking:** Select “On” or “off” to set whether to turn on the tracking function.
- 2) **Mode:** Select "Presenter" or "Zone". (If Zone is selected, you need to configure the region; otherwise, it has no effect.)
- 3) **Regional Settings:** We take Region 1 as an example. On the PTZ Area, adjust image by clicking direction buttons to select one region. After finishing region1 setting, click “Set” to complete the Region1 Tracking. Other region settings are same as region.

You can set 4 different regions, and minimum 2 regions. And the Regional Tracking settings can only be configured through the webpage.

- 4) **Call out the regional tracking:** Click “Run” of corresponding region on the “Regional settings” area

1. Each preset preview image must be continuous from left to right and overlap when setting the tracking regions.
2. You need to tick next to the region number to save the setting location when you setting the region.

Note: Each preset preview image must be continuous from left to right and overlap when setting the tracking regions.

3.4.4 Configuration

Click Configuration to enter into the device parameters setting page.

There are the following options: audio configuration, video configuration, network configuration, PTZ configuration, internet access configuration, system configuration, detailed description see the following table.

Menu	Explanation
Audio configure	Including audio compressing format, sampling frequency, sampling precision, compressing code rate settings etc.
Video configure	Including video encoding, video parameters, character-overlapping, character size, video output setting etc.
Network configure	Including basic parameters, Ethernet, DNS, GB28181, wireless network setting etc.
System configure	Including equipment property, system time, user management, version update, reset, reboot device settings etc.

3.4.5 Audio Configuration

Switch: Choose to enable the audio or not.

Compressing Format: Set audio compressing format and the device will reboot automatically after change (default AAC)

Sampling Frequency: Set sampling frequency and the device will reboot automatically after change (default 48000)

Sampling Precision: Set sampling precision (default 16bits)

Compressing Code Rate: Set audio compressing code rate (default 64bits, 32, 48, 96, 128bits optional)

Channel Type: Set the channel type (mono by default, stereo optional)

Input Volume: Set the input volume (default 2, 1-10 optional)

Click "Save", it will remind "Enable has changed. Restart the device to take effect after the success of the save.", then please reboot the camera to make new setting effect.

3.4.6 Video Configuration

1) Video Encoding

Code stream: **Stream:** Different video output mode setting, use different streams.(Main stream, secondary stream)

Compression Format: Set the video compression format, save and reboot to take it effect (main / secondary stream default: H.264, H.265 optional)

Profile: Set Profile mode (default HP, BP, MP optional)

Video Size: Set video image resolution, save and reboot to take it effect (main stream default 1920*1080, 3840*2160, 1280*720 optional; default secondary stream 720*480, 640*360, 320*240, 640*480 optional)

Stream Rate control: Set rate control mode, save and reboot to take it effect (main / secondary stream default variable bit rate, fixed rate is for option).

Rate (Kb/s): Set the video bit rate (main stream default 8192b/s, 64-81920Kb/s optional; secondary stream default 1024Kb/s, 64-5120Kb/s optional).

Frame rate (F/S): Set the video frame rate (main/ secondary stream default 25F/S, main stream 5-30F/S optional,

secondary stream 5-30F/S optional).

Key frame interval: Set the key frame interval (main / secondary stream default 25, main stream 1-150F optional. secondary stream 1-150F optional).

Minimum QP of key frame interval: Set minimum QP of key frame interval(Default 10, 1-51 optional)

Stream Name: When streaming via rtsp or rtmp, user can modify stream name. Main Stream (live/av0), secondary stream (live/av1)

Click the "Save" button to display the "saved successfully" message, then settings take effect.

2) Stream Release

Switch: To turn on/off the main / secondary stream.

Protocol: Primary / secondary stream applies RTMP protocol.

Host Port: Server port number (default 1935, 0-65535 optional)

Host Address: Server IP addresses (default 192.168.5.11)

Stream Name: Choose a different stream name (live / av0, live / av1 optional).

User: Set the user name.

Password: Set the password.

Click on the "Save" button to display the "Save successful" message, then settings take effect.

3) RTP Broadcasting

Main/Sub Stream:On/off

Protocol: RTP or TS

Address: Default 224.1.2.3. It can be edited.

Port: Main Stream Default Port: 4000, Sub Stream Default Port: 4002

Visit: Address comes up after setting. Eg ; rtp: //224.1.2.3:4000; udp: //@224.1.2.3:4000

4) Video Parameters

a.Focus: Focus mode, focus range, focus sensitivity can be set.

Focus Mode: Set the focus mode (the default auto, manual, one push optional)

Focus Tactic: set the focus tactic (Default before-focus, after-focus, normal meeting, education tracking, moving-target focus, center focus optional.)

Focus Sensitivity: Set the focus sensitivity (default is low, high, medium optional)

b.Exposure: Exposure mode, exposure compensation, back light compensation, anti-flicker, gain limit, shutter speed, aperture value and brightness can be set.

Exposure Mode: Set the exposure mode (the default automatic, manual, shutter priority, aperture priority, Brightness priority optional)

Exposure compensation: Exposure compensation setting is active when it is auto status (default is off).

Exposure compensation value: Set the exposure compensation value, valid when it is set for auto (default -2, -7 to 7 optional).

BLC: Set back light compensation, valid when it is auto status (default is off).

Anti-flicker: Set up anti-flicker mode, valid when status of automatic, aperture or brightness priority (default 50Hz, closed, 60Hz optional).

Gain limit: Set the gain limits, auto, active when it is status of aperture or brightness priority (default 10, 0-15 optional).

Gain: Set gain, only valid in manual exposure mode and shutter priority (default 6, 0~36 optional)

Shutter speed: Active when it is status of manual or shutter-priority (1/30, 1/60, 1/90, 1/100, 1/120, 1/180, 1/250, 1/350, 1/500, 1/725, 1/1000, 1/2000, 1/3000, 1/4000, 1/6000, 1/10000 optional).

Aperture value: Set the aperture value, active when it is status of manual or aperture-priority (default F1.8, closed F11, F9.6, F8.0, F6.8, F5.6, F4.8, F4.0, F3.4, F2.8, F2.4, F2.0, F1.8 optional).

Brightness: Set the brightness value, active when it is a state of brightness priority (default 7, 0-14 optional).

c.Color: White balance, saturation, hue, red fine tuning, blue fine tuning, red gain, blue gain can be set.

White balance modes: Set the white balance mode (the default automatic, 2400K, 2500K, 2600K, 2700K, 2800 K, 2900K, 3000K, 3100K, 3200K, 3300K, 3400K, 3500K, 3600K, 3700K, 3800K, 3900K, 4000K, 4100K, 4200K, 4300K, 4400K, 4500K, 4600K, 4700K, 4800K, 4900K, 5000K, 5100K, 5200K, 5300K, 5400K, 5500K, 5600K, 5700 K, 5800 K, 5900K, 6000K, 6100K, 6200K, 6300K, 6400K, 6500K, 6600K, 6700K, 6800K, 6900K, 7000K, 7100K, manual, One-push optional).

Note: Click the “Correction” button when selected the One-push white balance mode.

Red fine-tuning: Default 0, -10~10 optional (only available in automatic mode)

Blue fine-tunable: Default 0, -10~10 optional (only available in automatic mode)

Saturation: Set the saturation (default 100%, 60%, 70%, 80%, 90%, 100%, 110%, 120%, 130%, 140%, 150%, 160%, 170%, 180%, 190%, 200% optional).

Hue: Default 0, -15~15 optional

Red Gain: Set the red gain, effective when it is manual (default 100, 0-255 optional).

Blue Gain: Sets the Blue gain, effective when it is manual (default 100, 0-255 optional).

d.Image: Brightness, contrast, sharpness, black and white mode, digital zoom,

Brightness: Set the brightness (default 16, 0-32 optional).

Contrast: Set the contrast (default 64, 0-128 optional).

Sharpness: Set the sharpness value (default 6, 0-11 optional).

Black and white mode: Set black and white mode (default color, black/white optional).

Digital Zoom: Set the electronic zoom (default Off, On optional)

e.Noise Reduction:

Set noise reduction level (default 6, Auto, 1-11 and Off optional).

f.Style:

Select image (Default, standard, brightness, clarity, and soft can be set)

Note: Click “Refresh” to make revision of any video parameters of a, b, c, d, e, f effective.

5) Character-Overlapping

Display date and time: Set whether to display the time and date (default display).

Display Title: Set whether to display the title (default display).

Font Color of Time: Set font color of time and date (default white, black, yellow, red, and blue optional).

Font Color of Title: Set font color of title (default white, black, yellow, red, and blue optional).

Moving characters: Set the display position of moving date, time and title, click on the "up, down, left, right" buttons to move the corresponding character position.

Title Content: Set title content (default CAMERA1).

Time Content: Set time content (default 1970/01/10 05:36:00)

Click on the "Save" button and display the "Save successful" message, then valid

6) Character Size

Main stream character size: Set the character size of the display, the device will restart automatically after changed and saved (default 48, 8-120 optional)

Secondary stream character size: Set the character size of the display, the device will restart automatically after changed and saved (default 48, 38-120 optional)

Click on the "Save" button to display "Parameter saved successfully" message, set to take effect

7) Video output

Output format: Set the video output format

SDI output format: default 1080P30, 1080P60, 1080P59, 1080P50, 1080I60, 1080I59, 1080I50, 1080P30, 1080P29, 1080P25, 720P60, 720P59, 720P50 optional.

HDMI output format: default 3840x2160P30, 3840x2160P60, 3840x2160P59, 3840x2160P50, 3840x2160P30, 3840x2160P29, 3840x2160P25, 1080P60, 1080P59, 1080P50, 1080I60, 1080I59, 1080I50, 1080P30, 1080P29, 1080P25, 720P60, 720P59, 720P50 optional.

3.4.7 Network Configuration

1) Network port

Data port: Set the data port, the device will restart automatically after changed (default 3000, 0-65535 optional)

Web Port: Set Web port, the device will restart automatically after changed (default is 80, 0-65535 is optional)

Onvif Port: Set Onvif port, the device will restart automatically after changed (default 2000, 0-65535 optional)

Soap Port: Set Soap port (default 1936, 0-65535 optional)

RTMP Port: Set RTMP port (default 1935, 0-65535 optional)

RTSP Port: Set RTSP port, the device will restart automatically after changed (default 554, 0-65535 optional).

Visca Port: Set Visca port, the device will restart automatically after changed (default 3001, 0-65535 optional).

Https Port: Set http port, the device will restart automatically after changed (default 443, 0-65535 optional).

WebSocket Port: Set WebSocket port, the device will restart automatically after changed (default 8088, 0-65535 optional).

Click on the "Save" button, it will be valid when display "Save successful".

RTSP Obtaining method: rtsp: // device IP address: 554 / live / av0 (av0 main stream; av1 secondary stream)

RTMP Obtaining method: rtmp: // device IP address: 1935 / live / av0 (av0 main stream; av1 secondary stream)

2) Ethernet parameters

DHCP: Enable or disable obtain IP automatically can be set. Save changes and reboot the device to takes effect (default: OFF)

IP Address: Set the IP address, save changes and reboot the device to takes effect (default 192.168.5.163).

Note: This IP address is the same with the one used to login Web page.

Subnet Mask: Set the subnet mask (default 255.255.5.0).

Default Gateway: Set the default gateway (default 192.168.5.1).

Physical Address: Set the physical address (the parameter is read-only but can not be modified).

Click on the "Save" button, it will be valid when display "Save successful". (Note: To prevent IP conflicts When modify)

3) DNS parameters

Preferred DNS server: Set the preferred DNS server. (Default 8.8.8.8).

Alternate DNS server: Alternate DNS server settings. (Default 0.0.0.0).

Click on the "Save" button, it will be valid when display "Save successful".

4) GB28181

Switch: Set whether open GB28181, can check

Time Synchronization: Whether synchronization time is set, you can check

Stream Type: Stream type setting (the default main stream, secondary stream optional)

Sign effective time (in seconds): 3600 Range 5-65535

Heartbeat time (seconds): 60 Range 1-65535

Register ID: 34020000001320000001

Register User name:IPC

Register Password:12345678

Equipment ownership: Users can add their own

Administrative regions: Users can add their own

Alarm Zone: Users can add their own

Equipment installation address: Users can add their own

Local SIP Port: 5060 Range 0-65535

GB28181 Server Address: IP address of the computer

Server SIP Port: 5060 Range 0-65535

Server ID: 34020000002000000001

Click on the "Save" button, it will be valid when display "Save successful".

5) SRT

SRT Port: Set the SRT port (default 9000, 0-65535 optional)

SRT Password: Set SRT password

SRT Password Length: Set the SRT password length (default 0, 16, 24, 32 optional)

Click the "Save" button, and the prompt message "Parameters saved successfully! It will take effect after restarting!"

6) RTMP

Enable RTMP: Enable/Disable RTMP

Click the "Save" button, and it will display "Parameters saved successfully! The new parameter will take effect after restarting."

3.4.8 System Configuration

1) Device Properties

Device Name: Set the device name (the default Camera1, user can add their own).

Device ID: Set the device ID (default 1, Read-Only).

System Language: Set the system language (default Simplified Chinese, English optional).Need to re-login after modify and save the setting.

Click on the "Save" button, it will be valid when display "Save successful".

2) System Time

Date Format: Set the date format (YYYY-MM-DD default That year - month - day, MM-DD-YYYY namely Month - Day - Year, DD-MM-YYYY date - month - year Optional).

Date Separator: Set the date separator (default '/', '.', '-' Optional).

Time Zone: Set the time zone (default East eight districts, other time zones optional). **Time**

Type: Set the time types (default 24 hours, optional 12 hours).

Enable NTP: Enable/disable NTP

Update Interval: Set the NTP server automatic updated time interval. Valid after setting NTP server synchronization (default one day, 2-10 days Optional).

NTP Server Address or Domain Name: Set NTP server address or domain name (default time.nits.gov). Valid after setting NTP server synchronization.

NTP Server Port: Sets the NTP server port (default 123).Valid after setting NTP server synchronization. Set the time manually, Effective when set manually.

Time Setting: Set time mode (to choose the computer time synchronization, NTP server time synchronization, or set manually).

Computer Time: Set the computer synchronization valid.

Click on the "Save" button, it will be valid when display "Save successful".

3) User Management

Select Users: Set the user type (the default administrator, Common User 1, Common User 2 optional)

User Name: Set the user name (Select User Administrator default admin; select a common user1 default user1; to select a common user 2 default user2; user can modify their own)

Password: Set a password (Select User Administrator default admin; select a common user1 default user1; to select a common user 2 default user2; user can modify their own).

Password Confirmation: Confirm the input passwords are the same or not.

Click on the "Save" button to display the "Save successfully" message, then the set is to take effect.

Note: Please note the case-sensitivity of the user name and password. If login page by a common user's name and password, one does not have configuration privileges but can only operate to preview, playback, logout.

4) Version upgrade

Users only read the version information above which is consistent with the menu version but can not modify. Different types of the machine has different information.

Update File: Click "Browse ..." installation, to select the upgrade file in the pop-up window.

Click on the "Upgrade" button, the upgrade dialog will appear, the device will reboot automatically after update successfully.

Note:

1. Make sure the power and network is keeping connected during the process, or the upgrade will fail.

2. After the version upgrade is complete, you need to restore factory defaults:

- a. through web to restore the factory default configuration;
- b. through the recovery menu;
- c. remote control shortcut * # 6;

Choose one of the above three ways. The IP account and password of mode a are also restored to default.

5) Restore factory setting

Click on pop-up "Restore Factory Defaults" button and choose "yes" or "no", then the device will restart automatically and restore factory setting.

6) Reboot

Click on the pop-up "Reboot" button and choose "yes" or "no", then the device will restart automatically.

3.4.9 Logout

Point "Logout" pop-up "Confirmation" dialog; select "Yes" or "No", choose "Yes" to exit the current page and return to the user login interface again.

5.2 Camera Maintenance and Troubleshooting

5.2.1 Camera Maintenance

- 1) Please power off the camera and disconnect the power adapter and socket, if it's not used for a long run.
- 2) Use soft cloth or tissue to clean the camera cover.
- 3) Wipe it with a soft, dry cloth when cleaning the camera lens. Wipe it gently with a mild detergent if needed. Do not use strong or corrosive detergents to avoid scratching the lens and affecting the video quality.

5.2.2 Troubleshooting

1) No video output

- a, Check whether the camera power supply is connected,the voltage is normal,the power indicator is lit.
- b, Whether the machine could do self-inspection after restarted.
- c, Check whether the bottom of the DIP switch is the normal operating mode.
- d, Check whether the video output cable or video display is normal.

2) No image sometimes

Check whether the video output cable or video display is normal.

3) Image dithering when zoom-in or zoom-out

- a, Check whether the camera installation position is solid
- b,Whether there is shaking machine or objects around the camera

4) Remote controller can not work

- a, Remote control address is set to 1 (if the machine is set back to the factory defaults,remote control addresses need to be back to 1 too)
- b, Check whether the battery is installed on the remote controller or low .
- c, Check the camera working mode is the normal operating mode
- d, Check the menu whether is closed,camera control through remote controller is only available after exiting the menu.If video output from LAN,menu will not be displayed,menu will automatically exists 30s later,then it can be controlled by remote controller.

5) Serial port can not work.

- a, Check whether the camera serial device protocol,baud rate,address is consistent
- b, Check whether the control cable is connected properly
- c, Check whether the camera working mode is the normal operating mode

6) Web pages can not log in

- a, Check whether the camera is showing normally.
- b, Check whether the network cable is connected properly(Ethernet port yellow light flashes to indicate normal network cable connection)
- c, Check whether your computer is added the segment and the segment is consistent with the IP address of the camera
- d, Click "Start" and select "Run" and then type "cmd" in the computer;Click "OK" then turn on a DOS command window to enter ping 192.168.5.163. Press the Enter key to appear message as follows: Description network connection is normal

```

Chapter 6 Appendix

6.1 Specification

Model	RGB12X-UPAI-BK	RGB12X-UNAI-BK	RGB25X-UPAI-BK	RGB25X-UNAI-BK	RGB30X-UPAI-BK	RGB30X-UNAI-BK
NDI HX3	/	√	/	√	/	√
Optical Zoom	12X		25X		30X	
Focal Length	3.85mm ~ 43.06mm±5%		7.1 mm~ 175.95 mm±5%		6.91 mm~214.64 mm ±5%	
Viewing Angle	Horizontal:7.59°(N)~80.4°(W) Vertical:4.6°(N)~50.0°(W)		Horizontal: 2.5°(N)~59.2° (W) Vertical: 1.4° (N)~ 34.6°(W)		Horizontal: 1.98°(N)~59°(W) Vertical: 1.12°(N)~34.14°(W)	
Iris Value	F1.8 ~ F3.56±5%		F1.61 ~ F5.15±5%		F1.35~ F4.6±5%	
Image Sensor	1/2.5 inch SONY CMOS sensor		1/1.8 inch SONY CMOS sensor			
Effective Pixels	8.51M megapixel, 16: 9					
Video Format	HDMI 3840*2160P60/50/25/59.94/29.97 1080P60/50/25/59.94/29.97 1080i60/50/59.94 1080P@30fps 720P@60fps 720P@50fps 720P60/50/59.94 SDI 1080P60/50/25/59.94/29.97 1080i60/50/59.94 1080P@30fps 720P@60fps 720P@50fps 720P60/50/59.94 USB YUY2/NV12 640*480 /640*360 /480*270 /320*180P30/25 MJPEG/H.264/H.265 1920*1080/1600*896 /1280*720 /1024*576 /960*540/800*600/800*448 /720*576/720*480/640*480 /640*360 /480*270 /352*288/320*240P60/50/30/25 3840*2160P30					
Minimum Illumination	0.05Lux (F1.8, AGC ON)					
DNR	3D DNR					
Focus	Auto/Manual/One Push Focus					
Exposure Mode	Auto/Manual/Shutter priority/Aperture priority/brightness priority					
Shutter Speed	1/25~1/10000					

BLC	ON/OFF	
WDR	OFF/ Dynamic level adjustment	
Video Adjustment	Brightness / Color / Saturation / Contrast / Sharpness / B/W mode	
SNR	≥50dB	
Interface Parameter		
Interfaces	Video	HDMI, SDI, LAN(support POE+/NDI), USB,
	Audio	A-IN
	Communication	RS232-IN, RS232-OUT, RS422 (Compatible with RS485)
	Power	DC12V Power Supply
	Others	Rotary DIP switch, Power Switch
Video Compression Format	LAN: H.264,H.265 USB: MJPG,H.264,H.265,YUY2,NV12	
Audio Input	Double track 3.5mm linear input	
Audio Output	HDMI,LAN,SDI,USB	
Audio Compression Format	AAC	
LAN	10M/100M/1000M adaptive Ethernet port, support POE power supply, support audio and video output	
Network Protocols	RTSP/RTMP, ONVIF, GBT28181, SRT, NDI(Optional); Support network VISCA control protocol.	
Control Jacks	RS232-IN,RS232-OUT,RS422 compatible with RS485	
Serial Port Communication Protocols	VISCA/Pelco-D/Pelco-P; Support Baudrate: 115200/38400/9600/4800/2400bps	
USB Communication Protocol	UVC（Video Communication Protocol）, UAC（Audio Communication Protocol）	
Power Supply	HEC3800 Outlet (DC12V)	
Power Adapter	AC110V~AC220V to DC12V/2.5A	
Input Voltage	DC12V±10%	
Input	<1A	
Consumption	<12W	
PTZ Parameter		

Pan Move	-110°~+110°
Tilt Move	-30°~+30°
Pan Speed	0.1°/s~100°/s
Tilt Speed	0.1°/s~70°/s
Preset Speed	Pan: 78.8°/s, Tilt: 31.7°/s
Preset Quantity	Up to 255 preset (10 via remote control)
Other Parameter	
Storage Temperature	-10°C~+60°C
Storage Humidity	20%~95%
Working Temperature	-10°C~+50°C
Working Humidity	20%~80%
Dimension	220 (L) mm × 144mm (W) × 159mm (H)
Weight	about 1.7kg
Environment	Indoors

6.2 VISCA Protocol List

6.2.1 Camera Return Command

Ack/Completion Message		
	Command packet	Note
ACK	z0 41 FF	Returned when the command is accepted.
Completion	z0 51 FF	Returned when the command has been executed.

z = camera address + 8

Error Messages		
	Command packet	Note
Syntax Error	z0 60 02 FF	Returned when the command format is different or when a command with illegal command parameters is accepted
Command Not Executable	z0 61 41 FF	Returned when a command cannot be executed due to current conditions. For example, when commands controlling the focus manually are received during auto focus.

6.2.2 Camera Control Command

6.5 Terms & Definitions

●RCA: Connector used primarily in consumer AV equipment for both audio and video. The RCA connector was developed by the Radio Corporation of America.

●BNC: Stands for Bayonet Neill-Concelman. A cable connector used extensively in television (named for its

inventors). A cylindrical bayonet connector that operates with a twist-locking motion .

- CVBS: CVBS or Composite video, is an analog video signal without audio. Most commonly CVBS is used for transmission of standard definition signals. In consumer applications the connector is typically RCA type, while in professional applications the connector is BNC type.

- YPbPr: Used to describe the colour space for progressive-scan. Otherwise known as component video.

- VGA: Video Graphics Array. VGA is an analog signal typically used on earlier computers. The signal is non-interlaced in modes 1, 2, and 3 and interlaced when using in mode.

- DVI: Digital Visual Interface. The digital video connectivity standard that was developed by DDWG (Digital Display Work Group). This connection standard offers two different connectors: one with 24 pins that handles digital video signals only, and one with 29 pins that handles both digital and analog video.

- SDI: Serial Digital Interface. Standard definition video is carried on this 270 Mbps data transfer rate. Video pixels are characterized with a 10-bit depth and 4:2:2 color quantization. Ancillary data is included on this interface and typically includes audio or other metadata. Up to sixteen audio channels can be transmitted. Audio is organised into blocks of 4 stereo pairs. Connector is BNC.

- HD-SDI: high-definition serial digital interface (HD-SDI), is standardized in SMPTE 292M this provides a nominal data rate of 1.485 Gbit/s.

- 3G-SDI: standardized in SMPTE 424M, consists of a single 2.970 Gbit/s serial link that allows replacing dual link HD-SDI.

- 6G-SDI: standardized in SMPTE ST-2081 released in 2015, 6Gbit/s bitrate and able to support 2160p@30.

- 12G-SDI:standardized in SMPTE ST-2082 released in 2015, 12Gbit/s bitrate and able to support 2160p@60.

- U-SDI:Technology for transmitting large-volume 8K signals over a single cable. a signal interface called the ultra high definition signal/data interface (U-SDI) for transmitting 4K and 8K signals using a single optical cable. The interface was standardized as the SMPTE ST 2036-4.

- HDMI: High Definition Multimedia Interface: An interface used for the transmission of uncompressed high definition video, up to 8 channels of audio, and control signals, over a single cable.

- HDMI 1.3: released on June 22 2006, and increased the maximum TMDS clock to 340 MHz (10.2 Gbit/s). Support resolution 1920 × 1080 at 120 Hz or 2560 × 1440 at 60 Hz). It added support for 10 bpc, 12 bpc, and 16 bpc color depth (30, 36, and 48 bit/px), called deep color.

- HDMI 1.4 : released on June 5, 2009, added support for 4096 × 2160 at 24 Hz, 3840 × 2160 at 24, 25, and 30 Hz, and 1920 × 1080 at 120 Hz. Compared to HDMI 1.3, 3 more features added which are HDMI Ethernet Channel (HEC) , audio return channel (ARC),3D Over HDMI, a new Micro HDMI Connector, an expanded set of color spaces.

-
- HDMI 2.0, released on September 4, 2013 increases the maximum bandwidth to 18.0 Gbit/s. Other features of HDMI 2.0 include up to 32 audio channels, up to 1536 kHz audio sample frequency, the HE-AAC and DRA audio standards, improved 3D capability, and additional CEC functions.
 - HDMI 2.0a: was released on April 8, 2015, and added support for High Dynamic Range (HDR) video with static metadata.
 - HDMI 2.0b: was released March, 2016, support for HDR Video transport and extends the static metadata signaling to include Hybrid Log-Gamma (HLG).
 - HDMI 2.1 : released on November 28, 2017. It adds support for higher resolutions and higher refresh rates, Dynamic HDR including 4K 120 Hz and 8K 120 Hz.
 - DisplayPort: A VESA standard interface primarily for video, but also for audio, USB and other data. DisplayPort (orDP) is backwards compatible with HDMI, DVI and VGA.
 - DP 1.1: was ratified on 2 April 2007, and version 1.1a was ratified on 11 January 2008. DisplayPort 1.1 allow a maximum bandwidth of 10.8 Gbit/s (8.64 Gbit/s data rate) over a standard 4-lane main link, enough to support 1920x1080@60Hz.
 - DP 1.2: introduced on 7 January 2010, effective bandwidth to 17.28 Gbit/s support increased resolutions, higher refresh rates, and greater color depth, maximum resolution 3840 × 2160@60Hz.
 - DP 1.4: publish on 1 Mar, 2016. overall transmission bandwidth 32.4 Gbit/s ,DisplayPort 1.4 adds support for Display Stream Compression 1.2 (DSC), DSC is a "visually lossless" encoding technique with up to a 3:1 compression ratio. Using DSC with HBR3 transmission rates, DisplayPort 1.4 can support 8K UHD (7680 × 4320) at 60 Hz or 4K UHD (3840 × 2160) at 120 Hz with 30 bit/px RGB color and HDR. 4K at 60 Hz 30 bit/pix RGB/HDR can be achieved without the need for DSC.
 - Multi-mode Fiber: Fibers that support many propagation paths or transverse modes are called multi-mode fibers, generally have a wider core diameter and are used for short-distance communication links and for applications where high power must be transmitted.
 - Single-mode Fiber: Fiber that support a single mode are called single-mode fibers. Single-mode fibers are used for most communication links longer than 1,000 meters (3,300 ft).
 - SFP : small form-factor pluggable, is a compact, hot-pluggable network interface module used for both telecommunication and data communications applications.
 - optical fiber connector: terminates the end of an optical fiber, and enables quicker connection and disconnection than splicing. The connectors mechanically couple and align the cores of fibers so light can pass. 4 most common types of optical fiber connectors are SC, FC, LC, ST.
 - SC: (Subscriber Connector), also known as the square connector was also created by the Japanese company –

Nippon Telegraph and Telephone. SC is a push-pull coupling type of connector and has a 2.5mm diameter. Nowadays, it is used mostly in single mode fiber optic patch cords, analog, GBIC, and CATV. SC is one of the most popular options, as its simplicity in design comes along with great durability and affordable prices.

- LC : (Lucent Connector) is a small factor connector (uses only a 1.25mm ferrule diameter) that has a snap coupling mechanism. Because of its small dimensions, it is the perfect fit for high-density connections, XFP, SFP, and SFP+ transceivers.

- FC :(Ferrule Connector) is a screw type connector with a 2.5mm ferrule. FC is a round shaped threaded fiber optic connector,mostly used on Datacom, telecom, measurement equipment, single-mode laser.

- ST: (Straight Tip) was invented by AT&T and uses a bayonet mount along with a long spring-loaded ferrule to support the fiber.

- USB: Universal Serial Bus is a standard that was developed in the mid-1990s that defines cables, connectors and communication protocols. This technology is designed to allow a connection, communication and power supply for peripheral devices and computers.

- USB 1.1: Full-Bandwidth USB, specification was the first release to be widely adopted by the consumer market. This specification allowed for a maximum bandwidth of 12Mbps.

- USB 2.0:or Hi-Speed USB, specification made many improvements over USB 1.1. The main improvement was an increase in bandwidth to a maximum of 480Mbps.

- USB 3.2: Super Speed USB with 3 varieties of 3.2 Gen 1(original name USB 3.0), 3.2Gen 2(original name USB 3.1), 3.2 Gen 2x2 (original name USB 3.2) with speed up to 5Gbps,10Gbps,20Gbps respectively.

USB version and connectors figure:

	Type A	Type B	Mini A	Mini B	Micro -A	Micro-B	Type C
USB 2.0							
USB 3.0							
USB 3.1& 3.2							

- NTSC : The colour video standard used in North America and some other parts of the world created by the National Television Standards Committee in the 1950s. NTSC utilizes an interlaced video signals.

- PAL: Phase Alternate Line. A television standard in which the phase of the colour carrier is alternated from line to line. It takes four full images (8 fields) for the colour-to-horizontalimages (8 fields) for the colour-to-horizontal phase relationship to return to the reference point. This alternation helps cancel out phase errors. For this reason, the hue control is not needed on a PAL TV set. PAL, is widely used in needed on a PAL TV set. PAL, is widely used in Western Europe, Australia, Africa, the Middle East, and Micronesia. PAL uses 625-line, 50-field (25 fps)

composite colour transmission system.

- **SMPTE:** Society of Motion image and Television Engineers. A global organization, based in the United States, that sets standards for baseband visual communications. This includes film as well as video and television standards.

- **VESA:** Video Electronics Standards Association. An organization facilitating computer graphics through standards.

- **HDCP:** High-bandwidth Digital Content Protection (HDCP) was developed by Intel Corporation and is in wide use for protection of video during transmission between devices.

- **HDBaseT:** A video standard for the transmission of uncompressed video (HDMI signals) and related features using Cat 5e/Cat6 cabling infrastructure.

- **ST2110:** A SMPTE developed standard, ST2110 describes how to send digital video over and IP networks. Video is transmitted uncompressed with audio and other data in a separate streams. SMPTE2110 is intended principally for broadcast production and distribution facilities where quality and flexibility are more important.

- **SDVoE:** Software Defined Video over Ethernet (SDVoE) is a method for transmission, distribution and management AV signals using a TCP/IP Ethernet infrastructure for transport with low latency. SDVoE is commonly used in integration applications.

- **Dante AV:** The Dante protocol was developed for and widely adopted in audio systems for the transmission of uncompressed digital audio on IP based networks. The more recent Dante AV specification includes support for digital video.

- **NDI:** Network Device interface (NDI) is a software standard developed by NewTek to enable video-compatible products to communicate, deliver, and receive broadcast quality video in a high quality, low latency manner that is frame-accurate and suitable for switching in a live production environment over TCP (UDP) Ethernet based networks. NDI is commonly found in broadcast applications.

- **RTMP:** Real-Time Messaging Protocol (RTMP) was initially a proprietary protocol developed by Macromedia (now Adobe) for streaming audio, video and data over the Internet, between a Flash player and a server.

- **RTSP :** The Real Time Streaming Protocol (RTSP) is a network control protocol designed for use in entertainment and communications systems to control streaming media servers. The protocol is used for establishing and controlling media sessions between end points.

- **MPEG:** Moving Picture Experts Group is a working group formed from ISO and IEC developing standards that allow audio/video digital compression and Transmission.

- **H.264:** Also known as AVC (Advanced Video Coding) or MPEG-4i is a common video compression standard. H.264 was standardized by the ITU-T Video Coding Experts Group (VCEG) together with the ISO/IEC JTC1 Moving Picture Experts Group (MPEG).

-
- H.265: Also known as HEVC (High Efficiency Video Coding) H.265 is the successor to the widely used H.264/AVC digital video coding standard. Developed under the auspices of ITU, resolutions up to 8192x4320 may be compressed.
 - API: An Application Programming Interface (API) provides a predefined function which allows access capabilities and features or routines via a software or hardware, without accessing source code or understanding the details of inner working mechanism. An API call may execute a function and/or provide data feedback/report.
 - DMX512: The communication standard developed by USITT for entertainment and digital lighting systems. The wide adoption of the Digital Multiplex (DMX) protocol has seen the protocol used for a wide range of other devices including video controllers. DMX512 is delivered over cable of 2 twisted pairs with 5pin XLR cables for connection.
 - ArtNet: An ethernet protocol based on TCP/IP protocol stack, mainly used in entertainment/events applications. Built on the DMX512 data format, ArtNet enables multiple “universes” of DMX512 to be transmitted using ethernet networks for transport.
 - MIDI: MIDI is the abbreviation of Musical Instrument Digital Interface. As the name indicates the protocol was developed for communication between electronic musical instruments and latterly computers. MIDI instructions are triggers or commands sent over twisted pair cables, typically using 5pin DIN connectors.
 - OSC: The principle of Open Sound Control (OSC) protocol is for networking sound synthesizers, computers, and multimedia devices for musical performance or show control. As with XML and JSON, the OSC protocol allows sharing data. OSC is transported via UDP packets between devices connected on an Ethernet.
 - Brightness: Usually refers to the amount or intensity of video light produced on a screen without regard to colour. Sometimes called black level.
 - Contrast Ratio: The ratio of the high light output level divided by the low light output level. In theory, the contrast ratio of the television system should be at least 100:1, if not 300:1. In reality, there are several limitations. Well-controlled viewing conditions should yield a practical contrast ratio of 30:1 to 50:1.
 - Colour Temperature: The colour quality, expressed in degrees Kelvin (K), of a light source. The higher the colour temperature, the bluer the light. The lower the temperature, the redder the light. Benchmark colour temperature for the A/V industry include 5000°K, 6500°K, and 9000°K.
 - Saturation: Chroma, Chroma gain. The intensity of the colour, or the extent to which a given colour in any image is free from white. The less white in a colour, the truer the colour or the greater its saturation. Saturation is the amount of pigment in a colour, and not the intensity.
 - Gamma: The light output of a CRT is not linear with respect to the voltage input. The difference between what you should have and what is actually output is known as gamma.

-
- Frame:** In interlaced video, a frame is one complete image. A video frame is made up of two fields, or two sets of interlaced lines. In a film, a frame is one still image of a series that makes up a motion image.
 - Genlock:** Allows synchronisation of otherwise video devices. A signal generator provides a signal pulses which connected devices can reference. Also see Black Burst and Color Burst.
 - Blackburst:** The video waveform without the video elements. It includes the vertical sync, horizontal sync, and the Chroma burst information. Blackburst is used to synchronize video equipment to align the video output.
 - Colour Burst:** In colour TV systems, a burst of subcarrier frequency located on the back part of the composite video signal. This serves as a colour synchronizing signal to establish a frequency and phase reference for the Chroma signal. Colour burst is 3.58 MHz for NTSC and 4.43 MHz for PAL.
 - Colour Bars:** A standard test pattern of several basic colours (white, yellow, cyan, green, magenta, red, blue, and black) as a reference for system alignment and testing. In NTSC video, the most commonly used colour bars are the SMPTE standard colour bars. In PAL video, the most commonly used colour bars are eight full field bars. On computer monitors the most commonly used colour bars are two rows of reversed colour bars.
 - Seamless Switching:** A feature found on many video switchers. This feature causes the switcher to wait until the vertical interval to switch. This avoids a glitch (temporary scrambling) which often is seen when switching between sources.
 - Scaling:** A conversion of a video or computer graphic signal from a starting resolution to a new resolution. Scaling from one resolution to another is typically done to optimize the signal for input to an image processor, transmission path or to improve its quality when presented on a particular display.
 - PIP:** Picture-In-Picture. A small image within a larger image created by scaling down one of image to make it smaller. Other forms of PIP displays include Picture-By-Picture (PBP) and Picture- With-Picture (PWP), which are commonly used with 16:9 aspect display devices. PBP and PWP image formats require a separate scaler for each video window.
 - HDR:** is a high dynamic range (HDR) technique used in imaging and photography to reproduce a greater dynamic range of luminosity than what is possible with standard digital imaging or photographic techniques. The aim is to present a similar range of luminance to that experienced through the human visual system.
 - UHD:** Standing for Ultra High Definition and comprising 4K and 8K television standards with a 16:9 ratio, UHD follows the 2K HDTV standard. A UHD 4K display has a physical resolution of 3840x2160 which is four times the area and twice both the width and height of a HDTV/FullHD (1920 x1080) video signal.
 - EDID:** Extended Display Identification Data. EDID is a data structure used to communicate video display information, including native resolution and vertical interval refresh rate requirements, to a source device. The source device will then output the provided EDID data, ensuring proper video image quality.
